DESCRIPTION

This building project involved the phased build of a new single storey extension to the existing secondary school and the demolition of the existing school buildings. The construction also included the relocation of a pitch, the construction of 3 ball courts with pedestrian access, car parking, and repairs to the existing site boundaries.

To allow for better vehicular and pedestrian access to the school facilities, a stone pier and gateway of regional historical significance had to be moved. Methodologies in line with conservation standards were prepared and followed. Each stone from both the cut stone work and random rubble wall were recorded, cleaned and stored to allow for as close an approximation to the original structure as possible.
